### Oklahoma City resident celebrates 113th birthday

**She's the oldest person in the city**  
The Oklahoma City resident celebrated her 113th birthday on Monday, Dec. 30. She is the oldest person in the city and has lived in Oklahoma City for over 80 years. She has six children and 12 grandchildren. She is a member of the First Baptist Church and has been married for 60 years. She is a very active person and enjoys spending time with her family and friends. She is a very kind and generous person and is always willing to help others in need.

She's the oldest person in the city. 20 of her 80 years lived in Oklahoma City. Photo by Lisa L. Lippert for the Oklahoman.

### Home electricity use in US falling to 2001 levels

**BETTER HOPE**  
Home electricity use in the United States has fallen to levels not seen since 2001, according to a report from the U.S. Energy Information Administration (EIA). The report shows that residential electricity consumption in the United States has declined by 1.5 percent since 2012, and is now at its lowest level since 2001. This is due to a combination of factors, including energy efficiency improvements in homes, the use of energy-efficient appliances, and the growing use of renewable energy sources. The EIA report also notes that commercial and industrial electricity consumption has also declined, contributing to the overall decrease in electricity use.

**BETTER GADGETS**  
The report also notes that energy efficiency improvements in homes, the use of energy-efficient appliances, and the growing use of renewable energy sources are contributing to the overall decrease in electricity use. This is a positive trend for the environment and for consumers looking to save money on their utility bills.

**ON THE OTHER HAND...**  
While electricity use is falling, the report also notes that the overall energy demand in the United States is still growing. This is due to the increasing use of energy-intensive technologies, such as data centers and electric vehicles. As a result, the United States will need to continue to invest in energy efficiency and renewable energy technologies to meet its growing energy needs.
